

GEO Guardian

How visible is your brand when buyers ask the AI?

Track 1 • Generative Engine Optimization

Built with OpenAI Agents SDK + Codex

100% synthetic data

Buyers ask AI assistants — is your brand there?

Invisible

if the AI doesn't recommend you, buyers never see you.

No console

unlike search, nothing tells you where you stand.

Wrong facts

models can state outdated or incorrect claims about you.

You can measure it: ask the questions buyers ask, and see who the AI recommends.

Probe, analyze, score, fix

1

Probe

Realistic buyer questions for the category.

2

Answer

An AI assistant answers each one.

3

Analyze

Mention, rank, sentiment, errors.

4

Remediate

A prioritized GEO playbook.

Score and share of voice are computed deterministically; every judgment shows the AI's actual answer.

WHAT THE JUDGES SEE

Run a scan, read the dashboard

Exec summary + score

A headline, key findings and a 0–100 visibility score with share of voice vs competitors.

See the AI's answer

Click any question to read the assistant's actual answer — the evidence behind every number.

Playbook, brief, report

A prioritized playbook, a generated content brief, a downloadable report and a trend vs your last scan.

Win the answers buyers actually see

Measured

a visibility score you couldn't see before — with a trend vs last scan.

Evidenced

every number backed by the AI's actual answer.

Actionable

exec summary, playbook, content brief and a report.

Scale: Any brand, category or market; track competitors and trends over time.

Show up when the AI answers.
